
Level 2 simulation (RotorPy): Hattenberger (measured) hovering; wind steps 0 to 5 m/s at t = 1 s, 100 Hz, no sensor noise.
SE3 position gains: RotorPy $k_p = 6.5\ \mathrm{s}^{-2}$, $k_d = 4.0\ \mathrm{s}^{-1}$; PX4-default $k_p = 1.71\ \mathrm{s}^{-2}$, $k_d = 1.8\ \mathrm{s}^{-1}$ (A9).
